

Gerard van Schie

GJvSchie@outlook.com | [Portfolio](#)

I learn fast and have a broad range of knowledge, I specialized during the master's in algorithms and programming language grammars and analysis. During my professional career I have developed the necessary skills to solve business-wide problems such as developing custom internal tooling and developing a self-generating testing framework. At my current job I have worked as Full-Stack developer and solidified my position quickly with exceptional performance. I am enthusiastic about programming and working in a flexible agile team.

- I am a real team player and perform well in agile teams whilst keeping an eye out for my colleagues
- Having worked extensively with many technologies during work, hobby, and study I can excel in any tech stack
- Deliver projects and features with raised quality standards and reduction in bugs to build customer trust
- Completed all Bachelor and Master courses on the first attempt

EXPERIENCE

NEXUS Nederland

Medior Full-Stack Developer | Jan 2025 – Present

Junior Full-Stack Developer | Dec 2023 – Dec 2024

Top 5 achievements:

- Ensured deadlines were met through coordinating and participating in high stake releases
- Extended internal CLI tool to decrease artifact release time **4x**
- Simplified debugging by automating widget embedding steps
- Improved agenda widget performance by **100x** to enable instant loading
- Eliminated **all** layout bugs by developing custom validation techniques

Top 5 skills:

- Proactivity
- Communication
- Taking ownership
- Iterative development
- Workflow improvements

Performed numerous tasks outside of my responsibilities such as taking ownership when projects missed a coordinator whilst the deadline was close or when colleagues were waiting for someone to decide what actions to take. In those moments I took the lead and ensured a successful delivery by talking to developers, product management, architects and deployment. I have learned on a technical level about building web-apps with Angular, Java, and SQL and deployment with terraform but also non-technical lessons like agile delivery and how to lead a team when the product owner or other role was absent. Finally I have improved the workflow for the team and other teams by creating custom tooling and scripts. I have frequently been commended by colleagues telling me it improved their satisfaction whilst it simultaneously improved product quality.

MySep Pte Ltd

Programmer

Top 5 achievements:

- Proposed a future-proof testing strategy to stakeholders and developers and implemented the solution, a self-generating testing framework
- Improved VBA to C# conversion speed by building a transpiler tool, reducing time from a **1 week to 2 hours**
- Increased algorithm speed **200x** with verified correctness
- Cross-checked calculations by hand, improving correctness of mathematical models
- Developed C# code generator for the testing framework

Top 5 skills:

- Stakeholder engagement
- Model verification
- Performance analysis
- Identifying improvements
- Migrating code

The goal of the employment was assisting in converting VBA code to C#, during this migration I identified possibilities for improving overall quality of the product by being able to run tests continuously. When talking to non-technical stakeholders it became clear there was a need for them to define tests as well resulting in adaptation to the solution. I then created this testing framework for the entire project by generating it from the source code. Additionally I have proposed proven improvements to the unit conversion logic and other concepts to reduce bugs.

Uniface BV

R&D Assistant

- Extended GitLab with test pipelines runner CI/CD for supported Linux platforms
- Improved test result overview by integrating JUnit reports
- Adapted build scripts for better readability and flexibility

Dec 2023 – Present

Vianen

May 2022 – Dec 2022

Arnhem

June 2021 – Aug 2021

Amsterdam

Uniface BV

June 2020 – Oct 2020

R&D Assistant

Amsterdam

- Revamped Ranorex workflow by removing **all** Jenkins overhead using architecture by code principles
- Optimized Ranorex tests, reducing pipeline duration by **15%**
- Automated source code transition from IBM Synergy to Git with Python

Bloed Kleinfruit

2015 – 2019

Employee

Waverveen

- Five year summer holiday work harvesting fruit

SKILLS & CERTIFICATES

- **Certificates:** Crucial Conversations, Crucial Accountability
- **Languages:** Angular, Java, JavaScript/TypeScript, HTML, SCSS/CSS, OpenAPI, Node.js, C#, .NET Core, Go
- **Technologies:** Git, GitHub Copilot, Linux, Postman
- **QA:** Unit testing, API testing, Playwright, SonarQube, Code performance analysis, Code coverage analysis
- **Cloud:** Docker, Kubernetes, ArgoCD, Terraform, Oracle Cloud

PROJECTS

Multi-camera surveillance

Feb 2021 – June 2021

Bachelor's project

Utrecht University

- Managed a team of 11 people as Scrum Master half the project timeline
- Identified changing team requirements during development and resolved them
- Assisted with architecture design process and system deployment
- Created and maintained Docker swarm files for the microservice application
- Created and maintained CI/CD scripts in GitHub and GitLab to perform automated builds
- Extended Python linter functionality to further comply with PEP standards and documentation requirements
- Made contributions in all the logic of 2 separate components
- Helped team members throughout the project to improve progress

Intelligent agent game testing

Jan 2023 – Oct 2023

Master's Thesis

Utrecht University

- Adapted part of the game C++ source code
- Changed and expanded the API implemented in Python
- Improved speed of example socket implementation
- Interpreted information in Object-oriented model in Java
- Used the iv4xr-framework in Java to develop an agent to automatically traverse the levels
- Proposed and implemented improvements to the framework for layered 2D navigation to handle a wider range of maps
- Provided the project with scripts to keep installation, building, and running simple

Shape retrieval system

Sept 2022 – Nov 2022

Multimedia Retrieval course

Utrecht University

- Pre-processed 3D shapes & Collected properties of the shapes
- Created a Qt GUI for the system and visualize the shapes
- Wrote a query algorithm to improve system performance
- Evaluated effectiveness of the query algorithm and wrote algorithm to automatically improve parameter weights to find similar shapes
- Visualized multidimensional data in 2D
- Presented and reported on the performance of the system

EDUCATION

Utrecht University

Nov 2023

Master of Computer Science – Specialization in Programming Technology & Algorithm Design and Analysis

Utrecht University

June 2021

Bachelor of Computer Science
